

As a truck driver by trade .If i was driving cross country it would be nice to know that all i had to do for traffic info in a certian city would be to tune in to one of the weather and traffic stations on xm radio. I would know if and where there was a problem with the traffic. To be able to change my route. I would think that there is much greater problems for congress than to worry about what than what is on the xmradio. I pay my fees to be able to listen to what i what to. If the NAB had thought of doing XMRADIO they would not want anyone to tell them what to put on the xm. LEAVE THE XMRADIO ALONE we pay to listen

THANK YOU
